About Me

Hello, I am a Software Engineering student in Addis Ababa University, AAIT. I am third year Software Engineering student and working hard to graduate with a good GPA and skill. I have done simple projects while I was second year for Data structure and algorithm, object oriented programming and Database courses. For Data structure and algorithm and object oriented programming I made a simple calendar which has a graphical user interface using java programming language. For Database course i have made a simple school management system for minilik secondary school using my SQL just to store information nothing more. Now for this year, I am working on hotel management system for Ebenezer guest house, for fundamentals of software engineering course project which has full stack a back end and a front end.

I really love countryside life a lot. I am a dynamic individual whose life is defined by a rich tapestry of interests, hobbies, and adventures that reflect my curiosity, passion for growth, and love for new experiences. One of my greatest interests lies in the world of literature. I enjoy delving into a wide range of genres, from historical fiction to contemporary novels. Books offer me an opportunity to explore different perspectives, cultures, and ideas, enriching my understanding of the world. Outside of reading, I have a deep love for travel. I see travel as a way to truly understand different cultures. For me, every trip is an adventure —an opportunity to learn, connect with new people, and experience life in ways that cannot be replicated by simply reading about it. Even though I have not traveled that much ,My travels have taken me from the Tis Abay, Tana in Bahir Dar to Fasil Genb in Gondar. i have traveled to bahir dar and Gondar quite a few times and it was an amazing experiences. Each journey has left a lasting impact on my personal growth.

My hobbies also include photography, a passion I picked up during my travels. Capturing moments in time, whether it's a stunning landscape or an intimate street scene, allows me to preserve memories and share my perspective with others. Photography has also taught me patience and the art of paying attention to detail. I am a coffee person. The love I have for coffee is not compared to anything. Just to mention from thing I love; I am a dog person, I love watching cooking shows, house renovation shows, and as always food, coffee and sleep are on the top of my list. In conclusion, my interests, hobbies, and adventures are a reflection of my diverse passions and a commitment to living a fulfilling life. From my love of literature to my photography, travel, and mindfulness practices, I embrace every opportunity to learn, explore, and grow.

CV

Website Design

Creative and detail-oriented Web Designer in crafting visually appealing, user-friendly, and responsive websites. I will start my work from designing wire frame and site diagram then proceed to the coding part. Before going to the development part i make documents to help me for implementation like proposal SRS SDS then proceed to the coding part.

Data Analytics

I have learned data analysis on udacity. It basically focuses on database like My SQL.These include the systematic collection of data, rigorous cleaning and validation of datasets, and the application of appropriate statistical methods to interpret the data. I have learned database in second year also. i got certification on Fundamentals of Data analysis on udacity.

[View certificate](#)

Programming Language

I have learned some programming Languages like Java, Python, HTML, CSS, my SQL and java script. I have learned this languages from campus and Udacity. I have certificate from udacity in JavaScript, HTML, CSS a Fundamentals of programming Languages. I learned python under computer programming course and java under OOP and DSA courses. I have a little bit of experience in full-stack development while building this personal portfolio and a hotel management system for Ebenezer Guest house.
